10. (a) Mod bagi menunjukkan hari yang paling banyak menerima surat.  
*Mode to show the day that received the highest number of letters.*
- (b) Median kerana terdapat nilai ekstrem dalam set data iaitu 17.  
*Median because there is an extreme value in the set of data which is 17.*
- (c) Mod kerana ini ialah data kategori dan untuk menunjukkan item kegemaran.  
*Mode because this is a categorical data and to show favourite item.*
- (d) Min kerana tiada nilai ekstrem dalam set data.  
*Mean because there is no extreme value in the set of data.*

11. (a) (i)  $\text{Min / Mean} = \frac{50 + 50 + 25 + 60 + 20}{5} = 41$

(ii) Tingkatan 4 / Form 4

(iii) Kedudukan median / Position of median  
 $= \frac{n+1}{2} = \frac{205+1}{2} = 103$

Median = Tingkatan 3 / Form 3

$$\begin{aligned}\text{Min / Mean} \\ &= \frac{8 \times 5 + 16 \times 4 + 5 \times 3 + 4 \times 2 + 7 \times 1}{40} \\ &= 3.35\end{aligned}$$

(ii) Median = di antara nilai ke-20 dan ke-21  
*between 20<sup>th</sup> and 21<sup>th</sup> value*  
= 4 markah / marks

12. (a) (i) Kilang / Factory A:

$$\begin{aligned}\text{Min / Mean} \\ &= \frac{80 + 75 + 80 + 80 + 80 + 81 + 84}{7} \\ &= 80 \text{ kg}\end{aligned}$$

Kilang / Factory B:

$$\begin{aligned}\text{Min / Mean} \\ &= \frac{82 + 85 + 70 + 80 + 81 + 78 + 84}{7} \\ &= 80 \text{ kg}\end{aligned}$$

- (ii) Kilang / Factory A:

$$\text{Julat / Range} = 84 - 75 = 9 \text{ kg}$$

Kilang / Factory B:

$$\text{Julat / Range} = 85 - 70 = 15 \text{ kg}$$

- (iii) Kilang A. Walaupun kedua-dua kilang itu mempunyai min jisim tepung gandum yang sama, tetapi kilang A membekalkan jisim tepung gandum yang lebih konsisten berbanding dengan kilang B.

Factory A. Although both factories have the same mean mass of wheat flour, but factory A provides a more consistent mass of wheat flour compared to factory B.

- (b) (i) Bagi gerai P, sukanan kecenderungan memusat yang sesuai ialah median kerana terdapat nilai ekstrem, iaitu 45 dalam data tersebut.

For stall P, the appropriate measure of central tendency is median because there is an extreme value, which is 45 in the data.

45, 70, 80, 85, 87

Median/ Median = 80

Bagi gerai  $Q$ , sukatan kecenderungan memusat yang sesuai ialah min kerana taburan markah adalah sekata.

*For stall  $Q$ , the appropriate measure of central tendency is mean because the distribution of the marks is uniform.*

$$\text{Min/ Mean} = \frac{85 + 80 + 79 + 73 + 78}{5} \\ = \frac{395}{5} \\ = 79$$

(ii) Julat gerai  $P$  / Range of stall  $P = 87 - 45$   
 $= 42$

Julat gerai  $Q$  / Range of stall  $Q = 85 - 73$   
 $= 12$

$$\text{Min gerai } P = \frac{85 + 80 + 70 + 87 + 45}{5} \\ \text{Mean of stall } P = \frac{367}{5} \\ = 73.4$$

Gerai  $Q$  kerana secara keseluruhan, markah bagi gerai  $Q$  adalah lebih tinggi ( $\text{min } Q > \text{min } P$ ) dan lebih konsisten ( $\text{julat } Q < \text{julat } P$ ) berbanding gerai  $P$ .  
*Stall  $Q$  because as overall, the mark for stall  $Q$  is higher (mean of  $Q$  > mean of  $P$ ) and more consistent (range of  $Q$  < range of  $P$ ) than stall  $P$ .*

*The median value is the same for each person. Thus, the median cannot determine which person does the most exercise.*
- Nadira kerana nilai modnya adalah yang paling kecil, iaitu 4, berbanding yang lain.  
*Nadira because the mode value is the smallest, which is 4, compared to others.*
- Susunan nilai min daripada paling kecil kepada paling besar:  
*The arrangement of the mean values from the smallest to the largest:*  
Nadira, Meng Kai, Sawing, Thinesh
- Disember kerana nilai min bagi bulan Disember adalah yang paling kecil, iaitu 4.  
*December because the mean value for December is the smallest, which is 4.*
- Jun kerana nilai median bagi bulan Jun adalah paling besar, iaitu 9.  
*June because the median value for June is the largest, which is 9.*
